

Rotary Hammer 40mm (1-9/16") HR4013C / HR4003C

TI, Th

makita

Tnakita

Adapted for SDS-MAX bits

ADVANCED Vibration Control

Extra Comfort with unrivalled low level of vibration

Photo : HR4013C (Tool does not come with bit.)

Comparison of Vibration level* and Time to reach ELV (Exposure Limit of Vibration)**

| HR4013C | 5.0m/s ² | 480min. |
|-------------------|---------------------|---------|
| Predecessor Model | 7.5m/s ² | 213min. |
| Competitor "B" | 10m/s ² | 120min. |

*It is known as the tri-axial value and value at Directive of A(8). **It means the maximum amount of vibration that an operator may be exposed to on any single day.

Adapted for SDS-MAX bits Photo: HR4013C (Tool does not come with bit.)

High performance

with 32mm diameter bit

Compared with our predecessor model

Drilling efficiency Chipping efficiency 20% higher 45% higher

with bull point

Unrivalled low level of vibration

Vibration absorbing housing (HR4013C)

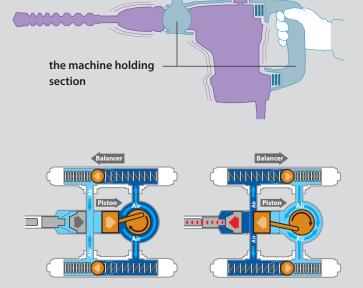

This is the new AVT mechanism advanced from the current "Vibration absorbing handle". The level of vibration is further reduced by completely separating the machine holding section from the motor/transmission section

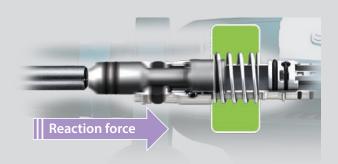

Active dynamic vibration absorber

ensures operation with extremely low vibration. allows tool design with flat body sides for better handling.

Damper spring

absorbs reaction force caused by drill bit at the moment of impact.

lock-on in hammering mode

- Lock-on switch for continuous chiseling applications
 - Trigger switch for intermittent chiseling applications

TE Rotation with hammering Bit angle settings

Soft no load" function (HR4013C)

- reduces vibration of tool body when idling, accordingly decreases the amount of vibration to operator's hands during a day's operation.
- minimizes deflection of bit tip from aiming point when starting chipping.
